Clean Water for a Healthy World

**UN-Water Decade Programme on Advocacy and Communication (UNW-DPAC)
United Nations Office to Support the International Decade for Action
'Water for Life' 2005-2015**

Water quality reader

Produced by the UN-Water Decade Programme on Advocacy and Communication (UNW-DPAC), this reader is intended for all those interested in getting familiar with water quality issues. The reader provides basic references for easy reading and some of the latest and most relevant UN publications on water quality. It also contains references for specific audiences such as water suppliers, educators, farmers or policy-makers.

The views expressed in this publication do not necessarily reflect the views of the United Nations Secretariat or the United Nations Office to Support the International Decade for Action (UNO-IDfA) 'Water for Life' 2005-2015. The designations employed in this publication and the presentation of the material do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations or the UNO-IDfA 'Water for Life' 2005-2015 concerning the legal status of any country, territory, city or area, or of its authorities, or concerning the delimitation of its frontiers or boundaries.

WATER QUALITY: AN OVERVIEW

Clearing the Waters: A focus on water quality solutions

United Nations Environment Programme (UNEP). 2010

www.unep.org

This publication forms part of UNEP's efforts to call attention of the international community, national governments, and communities, to water quality challenges and solutions. Based on the synthesis of existing data from many public databases and published reports, the publication provides an overview of current major water quality contaminants and the human activities that affect water quality, describes the impacts of poor water quality on the environment, human health, and vulnerable communities, and offers insights into solutions to address water quality problems and the mechanisms through which the solutions can be implemented.

Sick Water? The central role of wastewater management in sustainable development. A Rapid Response Assessment.

United Nations Environment Programme (UNEP), UN-HABITAT, GRID-Arendal. 2010

www.grida.no, www.unep.org, www.unhabitat.org

The first part of this Rapid Response Assessment report addresses the critical challenges we face in managing wastewater and considers the implications for people and the environment across different sectors, and how these may be influenced by issues such as population growth, urbanization and climate change. The second part looks at solutions and how these challenges can be turned around. Finding appropriate solutions will require innovation at both ends of the pipe. Innovation to reduce the volume and contamination of wastewater produced, how to treat or even reuse the waste, and how to do it in an affordable sustainable way. The report reviews how the production and treatment cycle can be better understood and managed so that through better investment and management major environmental, societal, and economic dividends can be achieved.

Water Quality for Ecosystems and Human Health. 2nd edition

United Nations Environment Programme (UNEP), European Regional Centre for Ecohydrology (ERC), United Nations Educational, Scientific and Cultural Organization (UNESCO). 2008

www.gemswater.org/publications/pdfs/water_quality_human_health.pdf

Drawing on examples from around the world, this publication presents assessments of current water quality status and trends. It also provides an introduction to a diverse range of global water quality issues, including approaches to their identification, analysis and resolution.

UNICEF Handbook on Water Quality

United Nations Children's Fund (UNICEF). 2008

www.unicef.org/wash/files/WQ_Handbook_final_signed_16_April_2008.pdf

This handbook provides an introduction to all aspects of water quality, with a particular focus on the areas most relevant to professionals working in developing countries. It covers the effects of poor water quality, quality monitoring, the protection of water supplies, methods for improving water quality, and building awareness and capacity related to water quality. Finally, the handbook provides an extensive set of links to key water quality references and resources.

Water Quality Outlook

United Nations Environment Programme (UNEP), GEMS/Water, World Water Assessment Programme (WWAP). 2007

www.gemswater.org/common/pdfs/water_quality_outlook.pdf

This report presents a snapshot of global water quality issues as they relate to achieving the internationally agreed goals on water, sanitation and biodiversity. Evidence suggests that there have been improvements in the quality of water in some parts of the world. However, there are serious problems that must be addressed for health and prosperity to be reached universally.

Emerging issues in Water and Infectious Disease

World Health Organization (WHO). 2003

www.who.int/water_sanitation_health/emerging/emerging.pdf

This publications aims at broadening awareness of emerging issues in water and infectious disease and at guiding readers to sources of information that deal with these issues in greater depth.

WATER QUALITY STANDARDS AND GUIDELINES

WHO Guidelines for drinking-water quality

World Health Organization (WHO)

www.who.int/water_sanitation_health/dwq/guidelines/en/

The World Health Organization produces international norms on water quality and human health in the form of guidelines that are used as the basis for regulation and standard setting, in developing and developed countries worldwide.

Water quality - Guidelines, standards and health: Assessment of risk and risk management for water-related infectious disease

World Health Organization (WHO). 2001

www.who.int/water_sanitation_health/dwq/whoiwa/en/

To date, the various WHO guidelines relating to water have been developed in isolation from one another. The potential to increase consistency in approaches to assessment and management of water-related microbial hazards was discussed by an international group of experts between 1999 and 2001. These discussions led to the development of a harmonised framework, which was intended to inform the process of development of guidelines and standards. Subsequently, a series of reviews was progressively developed and refined, which addressed the principal issues of concern linking water and health to the establishment and implementation of effective, affordable and efficient guidelines and standards. This book is based on these reviews, together with the discussions of the harmonised framework and the issues surrounding it.

ASSESSING AND MONITORING WATER QUALITY

Water quality assessments. A guide to the use of biota, sediments and water in environmental monitoring. 2nd edition

World Health Organization (WHO). 1996

www.who.int/water_sanitation_health/resourcesquality/wqa/en/

This guide gives comprehensive and practical advice on designing and setting up monitoring programmes to obtain valid data for water quality assessment in all types of freshwater bodies. It provides key information for all agencies and individuals responsible for water quality and it is an aid for anyone involved in setting up a water quality assessment programme. The publication also addresses the key recommendations of Agenda 21.

Water quality monitoring: A practical guide to the design and implementation of freshwater quality studies and monitoring programmes

World Health Organization (WHO), United Nations Environment Programme (UNEP). 1996

www.who.int/water_sanitation_health/resourcesquality/wqmonitor/en/

This book covers the entire monitoring process providing detailed guidance for implementing a monitoring network with step-by-step descriptions of field and laboratory methods. It brings together information on proven methods and will be useful for anyone concerned with water quality monitoring with a scientific, managerial or engineering background, including field staff. An overview of the principles underlying hydrological, chemical, biological and sediment measurements together with their importance and relevance to water quality monitoring is also included.

Monitoring bathing waters: A practical guide to the design and implementation of assessments and monitoring programmes

World Health Organization (WHO). 2000

www.who.int/water_sanitation_health/bathing/bathing3/en/

This book provides comprehensive guidance for the design, planning and implementation of assessments and monitoring programmes for water bodies used for recreation. It addresses the wide range of hazards that may be encountered and emphasizes the importance of linking monitoring programmes to effective and feasible management actions to protect human health. It also provides details of sampling and analytical methods.

Groundwater Contamination Inventory. A Methodological Guide

United Nations Educational, Scientific and Cultural Organization (UNESCO). 2002

unesdoc.unesco.org/images/0013/001325/132503e.pdf

The broad objective of this document is to present a methodology for the inventory of groundwater contamination and to provide a guideline for planning, conducting, evaluating, and presenting the inventory. The guideline is aimed at professionals – as a manual or reference material for hydrogeologists or other specialists responsible for organizing and conducting groundwater contamination inventories, particularly in developing countries.

INFORMATION MATERIALS FOR SPECIFIC AUDIENCES

Water Suppliers

Water Safety Plan Manual: Step-by-step risk management for drinking-water suppliers

World Health Organization (WHO). 2009

www.who.int/water_sanitation_health/publication_9789241562638/en/

In 2004, the WHO Guidelines for Drinking Water Quality recommended that water suppliers develop and implement “Water Safety Plans” (WSPs) in order to systematically assess and manage risks. Since this time, governments and regulators, water suppliers and practitioners have increasingly embraced this approach, but they have also requested further guidance. This workbook answers this call by describing how to develop and implement a WSP in clear and practical terms. Stepwise advice is provided through 11 learning modules, each representing a key step in the WSP development and implementation process.

Protecting Groundwater for Health. Managing the quality of drinking-water sources

World Health Organization (WHO). 2006

www.who.int/water_sanitation_health/publications/protecting_groundwater/en/

This publication provides a structured approach to analysing hazards to groundwater quality, assessing the risk they may cause for a specific supply, setting priorities in addressing these, and developing management strategies for their control. For health professionals, it thus is a tool for access to environmental information needed for such a process, and for professionals from other sectors it gives a point of entry for understanding health aspects of groundwater management.

Heterotrophic plate counts and drinking water safety. The significance of HPCs for water quality and the human health

World Health Organization (WHO). 2003

www.who.int/water_sanitation_health/dwq/WSH02.08.pdf

This book provides a critical assessment of the role of HPC measurement in drinking water quality management. The HPC test (or Standard Plate Count), applied in many variants, is widely used to measure the heterotrophic microorganism population in drinking-water and other media. Heterotrophs are organisms, including bacteria, yeasts and moulds that require an external source of organic carbon for growth. This book provides valuable information on the utility and the limitations of HPC data in the management and operation of piped water systems as well as other means of providing drinking water to the public. It is of particular value to piped public water suppliers and bottled water suppliers, manufacturers and users of water treatment and transmission equipment and in-line treatment devices, water engineers, sanitary and clinical microbiologists, and national and local public health officials and regulators of drinking water quality.

Toxic cyanobacteria in water: A guide to their public health consequences, monitoring and management

World Health Organization (WHO). 1999

www.who.int/water_sanitation_health/resourcesquality/toxiccyanbact/en/index.html

This book examines the need to protect drinking water, recreational waters and other water supplies from contamination by toxic cyanobacteria and to control their impact on health. It discusses the nature, diversity and global occurrence of toxic cyanobacteria, their consequences for public health, and methods for the assessment, management, investigation and treatment of contaminated water supplies. Programmes for monitoring the causes and occurrence of cyanobacteria in water and techniques for the analysis of water samples are also described.

Educators

Introduction to Sandwatch. An Educational Tool for Sustainable Development. Chapter 8 “Water quality”

United Nations Educational, Scientific and Cultural Organization (UNESCO). 2005

unesdoc.unesco.org/images/0014/001427/142786e.pdf

Sandwatch seeks to change the lifestyle and habits of youth and adults on a community-wide basis, and to develop awareness of the fragile nature of the marine and coastal environment – in particular, the beach environment – and the need to use it wisely. Sandwatch provides the framework for school students, with the help of their teachers and local communities, to work together to critically evaluate the problems and conflicts facing their beach environments and to develop sustainable approaches to address these issues. Chapter 8 focus on water quality issues and propose an activity to learn measuring and monitoring water quality.

Farmers

Control of water pollution from agriculture. FAO irrigation and drainage paper 55

Food and Agriculture Organization (FAO). 1996

www.fao.org/docrep/w2598e/w2598e00.HTM

The objective of this document is to delineate the nature and consequences of agricultural impacts on water quality, and to provide a framework for practical measures to be undertaken by relevant professionals and decision-makers to control water pollution.

Policy-makers

Safer Water, Better Health- Costs, benefits and sustainability of interventions to protect and promote health

World Health Organization (WHO). 2008

whqlibdoc.who.int/publications/2008/9789241596435_eng.pdf

This document summarizes the evidence and information related to water and health in a broad sense-encompassing drinking-water supply, sanitation, hygiene, and the development and management of water resources. The report collects the ingredients that support policy decisions, namely the disease burden at stake, the effectiveness of interventions, their costs and impacts, and implications for financing. It presents an overview of current knowledge on the health impacts by country and by disease, and of what has worked to reduce that burden.

Water pollution control: A guide to the use of water quality management principles

United Nations Environment Programme (UNEP), World Health Organization (WHO), Water Supply and Sanitation Collaborative Council (WSSCC). 1997

www.who.int/water_sanitation_health/resourcesquality/watpolcontrol.pdf

This handbook addresses specific aspects of water resources management and water pollution control. A series of case studies from various regions is also included, highlighting successful models of wastewater management and pollution control from different parts of the world. This is a handbook for policy makers and environmental managers in water authorities and engineering companies engaged in water quality programmes, especially in developing countries. It is also suitable for use as a textbook or as training material for water quality management course

WATER QUALITY ISSUES AROUND THE WORLD

Asia

Implications of groundwater rehabilitation on water resources protection and conservation: artificial recharge and water quality improvement in the ESCWA region

United Nations Economic and Social Commission for Western Asia (UNESCWA). 2001

www.escwa.un.org/information/publications/edit/upload/enr-01-12-e.pdf

The main objective of this study is to review the status of groundwater pollution and present the techniques for groundwater rehabilitation being applied in different parts of the world, including the Arab world and the ESCWA region. The study highlights existing groundwater quantity and quality with regard to its use by different consuming sectors, pollution sources and pollutants, groundwater remediation techniques and protection measures.

Africa

Evaluation of Urban Pollution of Surficial and Groundwater Aquifers in Africa

United Nations Environment Programme (UNEP), United Nations Educational, Scientific and Cultural Organization (UNESCO). 2002

www.unep.org/DEWA/water/groundwater/africa/English/reports/Urban%20&%20Surficial%20GW%20Finnal%20Report.pdf

The Urban Pollution of Surficial and Groundwater Aquifers in Africa is a joint UNEP and UNESCO project that addresses the issue of aquifer vulnerability and the need to protect the quality of the continent's groundwater resources. This report presents the findings of this project evaluation.

Europe

UNECE Convention on the Protection and Use of Transboundary Watercourses and International Lakes

<http://www.unece.org/env/water/text/text.htm>

Since its entry into force in 1996, the UNECE Water Convention has provided an important legal framework and contributed to improving water quality and transboundary water management in the pan-European region. It aims to strengthen local, national and regional measures to protect and ensure the quantity, quality and sustainable use of transboundary water resources. The Convention obliges Parties to prevent, control and reduce transboundary impacts.

Protocol on Water and Health to the 1992 Convention on the Protection and Use of Transboundary Watercourses and International Lakes

United Nations Economic Commission for Europe (UNECE). 1999

www.unece.org/env/water/text/text_protocol.htm

The main aim of the Protocol is to protect human health and well being by better water management, including the protection of water ecosystems, and by preventing, controlling and reducing water-related diseases. The Protocol is the first international agreement of its kind adopted specifically to attain an adequate supply of safe drinking water and adequate sanitation for everyone, and effectively protect water used as a source of drinking water

Recommendations to ECE Governments on water quality criteria and objectives

United Nations Economic Commission for Europe (UNECE). 1993

www.unece.org/env/water/documents/Reco_Water-Quality%20Criteria&Obj..pdf

This document provides further guidance in the elaboration of water-quality criteria and the formulation and setting-up of water-quality objectives for inland surface waters with a view to strengthening international cooperation.
